

# SOME NOTES ABOUT AUTOMATED REASONING AND CONJECTURING

---

Josef Urban

Czech Technical University in Prague

November 27, 2025, Gothenburg

# Reasoning, Intuition, Discovery, Conjectures

*“C’est par la logique qu’on démontre, c’est par l’intuition qu’on invente.”*

(It is by logic that we prove, but by intuition that we discover.)

Henri Poincaré, Mathematical Definitions and Education.

*“Hypothesen sind Netze; nur der fängt, wer auswirft.”*

(Hypotheses are nets: only he who casts will catch.)

Novalis, quoted by Popper – The Logic of Scientific Discovery

# Leibniz's/Hilbert's/Russell's Dream: Let Us Calculate!

Solve all (math, physics, law, economics, society, ...) problems by  
**reduction to logic/computation**

[Adapted from: *Logicomix: An Epic Search for Truth* by A. Doxiadis]

# Induction/Learning vs Reasoning – Henri Poincaré

- Science and Method: Ideas about the interplay between correct deduction and induction/intuition
- *“And in demonstration itself logic is not all. The true **mathematical reasoning is a real induction** [...]”*
- I believe he was right: strong general reasoning engines have to **combine deduction and induction** (learning patterns from data, making conjectures, etc.)

# Automated Theorem Proving (ATP)

- One of the oldest fields of AI (Simon and Newell, Davis)
- Try to infer conjecture  $C$  from axioms  $Ax$ :  $Ax \vdash C$
- Systems: Vampire, E, SPASS, Prover9, Z3, CVC4, Satallax, iProver, ...
- Various search calculi (resolution, superposition, tableaux, inst-gen)
- more limited logics: SAT, QBF, SMT, UEQ, ... (DPLL, CDCL, ...)
- TP-motivated PLs: Prolog (*logic programming* - Hayes, Kowalski)
- Human-designed heuristics for pruning of the search space
- strongest methods: resolution (generalized modus ponens) on clauses:
  - $\neg man(X) \vee mortal(X), man(socrates) \vdash mortal(socrates)$
- resolution/superposition (equational) provers generate inferences, looking for the contradiction (empty clause)
- tableaux, connection calculi
- instantiation-based/SMT – systematically add ground instances and use SAT solvers to check satisfiability
- combined approaches - SAT run often inside the ATP (generalized splitting, AVATAR)
- ML guiding methods - both symbolic (hints/templates) and statistical

# The CADE ATP System Competition (CASC)

# Using First/Higher Order Automated Theorem Proving

- 1996: Bill McCune proof of Robbins conjecture (Robbins algebras are Boolean algebras)
- Robbins conjecture unsolved for 50 years by mathematicians like Tarski
- 2021: M. Kinyon, R. Veroff, Prover9: Weak AIM conjecture
- If  $Q$  is an Abelian Inner Mapping loop, then  $Q$  is nilpotent of class  $\leq 3$ .
- ATP has currently **only limited use for proving new conjectures**
- mainly in very specialized algebraic domains
- however ATP has become very useful in **Interactive Theorem Proving**
- a recent (2020) **performance jump in higher-order ATP**:
- Zipperposition, HO-Vampire, E-HO (J. Blanchette, A Bentkamp, P. Vukmirovic)

# What is Formal Mathematics?

- Developed thanks to the Leibniz/Russell/Frege/Hilbert/... program
- Mathematics put on **formal logic foundations** (*symbolic computation*)
- ... which btw. led also to the rise of computers (Turing/Church, 1930s)
- Formal math (1950/60s): **combine formal foundations and computers**
- **Proof assistants/Interactive theorem provers** and their large libraries:
- De Bruijn, Milner, Trybulec, Boyer and Moore, Gordon, Huet, Paulson, ...
- Automath (1967), LCF, Mizar, NQTHM, HOL, Coq, Isabelle, ACL2, Lean
- **Conceptually very simple:**
- Write all your axioms and theorems so that computer understands them
- Write all your inference rules so that computer understands them
- Use the computer to check that your proofs follow the rules
- **But in practice, it turns out not to be so simple**
- Many approaches, still not mainstream, but big breakthroughs recently

# The QED Manifesto – 1994

- *QED is the very tentative title of a project to build a computer system that effectively represents all important mathematical knowledge and techniques.*
- *The QED system will conform to the highest standards of mathematical rigor, including the use of strict formality in the internal representation of knowledge and the use of mechanical methods to check proofs of the correctness of all entries in the system.*
- *The QED project will be a major scientific undertaking requiring the cooperation and effort of hundreds of deep mathematical minds, considerable ingenuity by many computer scientists, and broad support and leadership from research agencies.*
- ....
- Never happened, but inspired a lot of development – “QED Singularity”

# Bird's Eye View of ITP Systems by T. Hales

## HOL Light

HOL Light has an exquisite minimal design. It has the smallest kernel of any system. John Harrison is the sole

## Mizar

Once the clear front-runner, it now shows signs of age. Do not expect to understand the inner workings of this system unless you have been

## Coq

Coq is built of modular components on a foundation of dependent type theory. This system has grown one PhD thesis at a time.

## Isabelle

Designed for use with multiple foundational architectures, Isabelle's early development featured classical constructions in set theory. However,

## Metamath

Does this really work? Defying expectations, Metamath seems to function shockingly well for those who are happy to live without plumbing.

## Lean

Lean is ambitious, and it will be massive. Do not be fooled by the name. "Construction area keep out" signs are prominently posted on the perimeter fencing.

## F. Wiedijk: Irrationality of $\sqrt{2}$ (informal text)

*tiny proof from Hardy & Wright, texts collected by F. Wiedijk:*

**Theorem 43 (Pythagoras' theorem).**  $\sqrt{2}$  is irrational.

The traditional proof ascribed to Pythagoras runs as follows. If  $\sqrt{2}$  is rational, then the equation

$$a^2 = 2b^2 \tag{4.3.1}$$

is soluble in integers  $a, b$  with  $(a, b) = 1$ . Hence  $a^2$  is even, and therefore  $a$  is even. If  $a = 2c$ , then  $4c^2 = 2b^2$ ,  $2c^2 = b^2$ , and  $b$  is also even, contrary to the hypothesis that  $(a, b) = 1$ .  $\square$

# Irrationality of $\sqrt{2}$ in Isabelle/HOL

```
theorem sqrt2_not_rational:
  "sqrt (real 2)  $\notin$   $\mathbb{Q}$ "
proof
  assume "sqrt (real 2)  $\in \mathbb{Q}$ "
  then obtain m n :: nat where
    n_nonzero: "n  $\neq$  0" and sqrt_rat: "|sqrt (real 2)| = real m / real n"
    and lowest_terms: "gcd m n = 1" ..
  from n_nonzero and sqrt_rat have "real m = |sqrt (real 2)| * real n" by simp
  then have "real (m2) = (sqrt (real 2))2 * real (n2)"
    by (auto simp add: power2_eq_square)
  also have "(sqrt (real 2))2 = real 2" by simp
  also have "... * real (m2) = real (2 * n2)" by simp
  finally have eq: "m2 = 2 * n2" ..
  hence "2 dvd m2" ..
  with two_is_prime have dvd_m: "2 dvd m" by (rule prime_dvd_power_two)
  then obtain k where "m = 2 * k" ..
  with eq have "2 * n2 = 22 * k2" by (auto simp add: power2_eq_square mult_ac)
  hence "n2 = 2 * k2" by simp
  hence "2 dvd n2" ..
  with two_is_prime have "2 dvd n" by (rule prime_dvd_power_two)
  with dvd_m have "2 dvd gcd m n" by (rule gcd_greatest)
  with lowest_terms have "2 dvd 1" by simp
  thus False by arith

# Big Example: The Flyspeck project

- Kepler conjecture (1611): The most compact way of stacking balls of the same size in space is a pyramid.

$$V = \frac{\pi}{\sqrt{18}} \approx 74\%$$

- Proved by Hales & Ferguson in 1998, 300-page proof + computations
- Big: Annals of Mathematics gave up reviewing after 4 years
- Formal proof finished in 2014
- 20000 lemmas in geometry, analysis, graph theory
- All of it at <https://code.google.com/p/flyspeck/>
- All of it **computer-understandable and verified** in HOL Light:  
`polyhedron s /\ c face_of s ==> polyhedron c`
- However, this took **20 – 30 person-years!**

# Conjecturing in Mathematics

- **Targeted**: generate intermediate lemmas (cuts) for a harder conjecture
- **Unrestricted** (theory exploration):
  - Creation of interesting conjectures based on the previous theory
  - One of the most interesting activities mathematicians do (how?)
  - Higher-level AI/reasoning task - can we learn it?
  - If so, we have solved math:
    - ... just (recursively) **divide** Fermat into many subtasks ...
    - ... and **conquer** (I mean: **hammer**) them away

# A Brief History of Automated Conjecturing

- **1970s–80s**
  - **Lenat's AM**: rediscovered concepts (e.g., primes, UFD); “interestingness”
  - **Langley's Bacon**: automated scientific discovery (Kepler-like laws)
  - **EURISKO**: adaptive heuristics that modify their own search strategies
- **1980s**
  - **Fajtlowicz's Graffiti**: graph theory conjecturing
  - many results later proven and influential
- **1990s–2000s**
  - **Colton's HR**: concept invention + conjecturing; discoveries in integer sequences & algebraic relations
  - Integration with ATPs for filtering trivial/false conjectures
- **2010s - More Symbolic Conjecturing**
  - **Hipster**: Isabelle-integrated exploration; lemmas for proof automation
  - **QuickSpec ecosystem**: scalable term generation, pruning & testing for specifications and lemma mining
- **2013+ Learning-Based/Neural Conjecturing**
  - Learning from large formal libraries: analogy-based lemma prediction
  - Neural→formal conjecture pipelines: generation, disambiguation, pruning
  - Reinforcement feedback loops connecting conjecturing & proving
  - Informalization/Autoformalization systems creating conjectures

# Karpathy'15 - RNN generating fake Math over Stacks

<http://karpathy.github.io/2015/05/21/rnn-effectiveness/>

For  $\bigoplus_{i=1, \dots, m} \mathcal{L}_{\bullet} = 0$ , hence we can find a closed subset  $\mathcal{H}$  in  $\mathcal{H}$  and any sets  $\mathcal{F}$  on  $X$ ,  $U$  is a closed immersion of  $S$ , then  $U \rightarrow T$  is a separated algebraic space.

*Proof.* Proof of (1). It also start we get

$$S = \text{Spec}(R) = U \times_X U \times_X U$$

and the comparicoly in the fibre product covering we have to prove the lemma generated by  $\coprod \mathbb{Z} \times_U U \rightarrow V$ . Consider the maps  $M$  along the set of points  $Sch_{fppf}$  and  $U \rightarrow U$  is the fibre category of  $S$  in  $U$  in Section, ?? and the fact that any  $U$  affine, see Morphisms, Lemma ?? . Hence we obtain a scheme  $S$  and any open subset  $W \subset U$  in  $Sh(G)$  such that  $\text{Spec}(R') \rightarrow S$  is smooth or an

$$U = \bigcup U_i \times_{S_i} U_i$$

which has a nonzero morphism we may assume that  $f_i$  is of finite presentation over  $S$ . We claim that  $\mathcal{O}_{X,x}$  is a scheme where  $x, x', s'' \in S'$  such that  $\mathcal{O}_{X,x'} \rightarrow \mathcal{O}'_{X',x'}$  is separated. By Algebra, Lemma ?? we can define a map of complexes  $GL_{S'}(x'/S'')$  and we win.  $\square$

To prove study we see that  $\mathcal{F}|_U$  is a covering of  $\mathcal{A}'$ , and  $\mathcal{T}_i$  is an object of  $\mathcal{F}_{X/S}$  for  $i > 0$  and  $\mathcal{F}_p$  exists and let  $\mathcal{F}_i$  be a presheaf of  $\mathcal{O}_X$ -modules on  $\mathcal{C}$  as a  $\mathcal{F}$ -module. In particular  $\mathcal{F} = U/F$  we have to show that

$$\widetilde{M}^\bullet = \mathcal{I}^\bullet \otimes_{\text{Spec}(k)} \mathcal{O}_{S,s} - i_X^{-1} \mathcal{F}$$

is a unique morphism of algebraic stacks. Note that

$$\text{Arrows} = (Sch/S)_{fppf}^{opp}, (Sch/S)_{fppf}$$

and

$$V = \Gamma(S, \mathcal{O}) \mapsto (U, \text{Spec}(A))$$

is an open subset of  $X$ . Thus  $U$  is affine. This is a continuous map of  $X$  is the inverse, the groupoid scheme  $S$ .

*Proof.* See discussion of sheaves of sets.  $\square$

The result for prove any open covering follows from the less of Example ?? . It may replace  $S$  by  $X_{spaces, \acute{e}tale}$  which gives an open subspace of  $X$  and  $T$  equal to  $S_{Zar}$ , see Descent, Lemma ?? . Namely, by Lemma ?? we see that  $R$  is geometrically regular over  $S$ .

**Lemma 0.1.** Assume (3) and (3) by the construction in the description.

Suppose  $X = \lim |X|$  (by the formal open covering  $X$  and a single map  $\text{Proj}_X(\mathcal{A}) = \text{Spec}(B)$  over  $U$  compatible with the complex

$$\text{Set}(\mathcal{A}) = \Gamma(X, \mathcal{O}_{X, \mathcal{O}_X}).$$

When in this case of to show that  $\mathcal{Q} \rightarrow \mathcal{C}_{Z/X}$  is stable under the following result in the second conditions of (1), and (3). This finishes the proof. By Definition ?? (without element is when the closed subschemes are catenary. If  $T$  is surjective we may assume that  $T$  is connected with residue fields of  $S$ . Moreover there exists a closed subspace  $Z \subset X$  of  $X$  where  $U$  in  $X'$  is proper (some defining as a closed subset of the uniqueness it suffices to check the fact that the following theorem

(1)  $f$  is locally of finite type. Since  $S = \text{Spec}(R)$  and  $Y = \text{Spec}(R)$ .

*Proof.* This is form all sheaves of sheaves on  $X$ . But given a scheme  $U$  and a surjective étale morphism  $U \rightarrow X$ . Let  $U \cap U = \coprod_{i=1, \dots, n} U_i$  be the scheme  $X$  over  $S$  at the schemes  $X_i \rightarrow X$  and  $U = \lim_i X_i$ .  $\square$

The following lemma surjective restrocomposes of this implies that  $\mathcal{F}_{x_0} = \mathcal{F}_{x_0} = \mathcal{F}_{X, \dots, 0}$ .

**Lemma 0.2.** Let  $X$  be a locally Noetherian scheme over  $S$ ,  $E = \mathcal{F}_{X/S}$ . Set  $\mathcal{I} = \mathcal{I}_1 \subset \mathcal{I}'_n$ . Since  $\mathcal{I}^n \subset \mathcal{I}^n$  are nonzero over  $i_0 \in \mathfrak{p}$  is a subset of  $\mathcal{I}_{n,0} \circ \bar{A}_2$  works.

**Lemma 0.3.** In Situation ?? . Hence we may assume  $\mathfrak{q}' = 0$ .

*Proof.* We will use the property we see that  $\mathfrak{p}$  is the mexst functor (??). On the other hand, by Lemma ?? we see that

$$D(\mathcal{O}_X) = \mathcal{O}_X(D)$$

where  $K$  is an  $F$ -algebra where  $\delta_{n+1}$  is a scheme over  $S$ .  $\square$
